WORK EXPERIENCE

Anima Vitae

Selangor, Malaysia

System Administrator

November 2015 - present

- Configured and maintained over 100+ workstations & 150+ servers and render nodes that run 100% on Linux operating system
- Written lots of shell scripts (Bash) and Python scripts to help lighten up the burden of monitoring and managing workstations and servers by making them automated
- Reduces operational costs by up to 90% by converting a physical router into a virtual router (OPNsense)
- Utilizing Arista, Cisco and Dell switches to link 4 offices with separate VLANs for workstations, render nodes, and servers
- Making use of PXE boot, SaltStack & Rez package management to automate the installation and configuration of workstations, render nodes, and servers
- Connecting local studio with Helsinki's with a site-to-site VPN for easy collaboration
- Utilizing an OpenVPN to deploy a VPN solution for WFH artists and vendors
- Configured an LXC container to run Expedat, a high-performance FTP alternative service, to maximize usage of network bandwidth for downloading and uploading
- Deployed multiple Docker containers on AWS to run internal usage applications consisting of a ticketing system, inventory system, and a complete computer management platform
- Configured a distributed file system cluster to house more than 500TB of the company's project files
- Responsible for in-house DHCP, DNS, Apache, and NIS servers to have a centralized system so that every artist can work from any workstation, and not be limited to only 1 single workstation
- Utilizing an Archiware P5 to archive completed projects to LTO tapes for safekeeping

Netccentric

Kuala Lumpur, Malaysia

System Administrator

November 2011 - April 2014

- Migrated the company's website (nuffnang.com & churpchurp.com) and databases running on CentOS Linux operating system in multiple countries (Malaysia, Singapore, Philippines) with a very minimal downtime
- Deployed a high-availability cluster for the company's website and databases to load balance the traffic and make sure the website is always available
- Successfully deployed a VPN for secure access to all of the company's servers
- Wrote lots of Bash scripts to monitor the servers and to automate a databases backup every night

EDUCATION

Cosmopoint - Institute of Information Technology

Diploma of Information Technology

Perak, Malaysia

May 2003 - June 2006

TECHNICAL SKILLS

Backup/Archive:

Archiware P5, LTO tape

Scripting:

Bash, Fish, Python

Configuration Management:

Git, Saltstack, Ansible

Containerization:

Docker, Docker Compose, LXC/LXD

Virtualization:

Proxmox, KVM, QEMU

Oracle Virtualbox, VMware Player

Cloud:

AWS EC2, AWS VPC, AWS CloudWatch

Operating System:

Linux Distro: Manjaro, Ubuntu, CentOS

Windows Version: Windows 11, 10, 7, XP

MacOS: Mojave, Catalina, Big Sur

Applications/Services:

DHCP, DNS, Apache, Cisco IOS, Arista EOS

MooseFS, CGRU Afanasy, Saltstack, Rez, ZFS

Zammad, Meshcentral, Snipe-IT

Networking:

Cisco ASA, Cisco Catalyst, Arista 7010T

Arista 7050-TX, Dell EMC

Hardware:

Lenovo P620, Dell PowerEdge R630

Supermicro FatTwin, Supermicro Workstation

HP BladeSystem, HP ProLiant DL380
